Live Class Lectures

Program: Implementing Interface

```
interface Area
{
    float PI=3.14f;        //final static variable
    void compute(int r);    //abstract method
}
class Circle implements Area
{
    public void compute(int r)
    {
        System.out.println("Area of Circle="+PI*r*r);
    }
    public static void main(String args[])
    {
        Circle c1=new Circle();
        c1.compute(10);
    }
}
```

OUTPUT:

Area of Circle=314.0

Program: extending Interface

```
interface Abc
{
    void display();
}
interface Xyz extends Abc
{
    void show();
}
class Mnp implements Xyz
{
    public void display()
    {
        System.out.println("I am from Abc interface:");
    }
    public void show()
    {
        System.out.println("I am from Xyz interface:");
    }
    public static void main(String args[])
    {
        Mnp m1=new Mnp();
        m1.display();
        m1.show();
    }
}
```

//Multiple inheritance using interface

```
interface ABC
{
    void display();
}
interface XYZ
{
    void show();
}
class PQR implements ABC,XYZ
{
    public void display()
    {
        System.out.println("I am from ABC interface");
    }
    public void show()
    {
        System.out.println("I am from XYZ interface");
    }
    public static void main(String args[])
    {
        PQR p1=new PQR();
        p1.display();
        p1.show();
    }
}
```

Program: We assume 5%TA,10% DA and 15% HRA of basic salary.

```
import java.util.*;
interface Salary
{
    int Basic_Salary=1000;
    void Basic_Sal();
}
class Employee
{
    String name;
    int age;
    void getdata()
    {
        Scanner sc=new Scanner(System.in);
        System.out.println("Enter Employee Name:");
        name=sc.next();
        System.out.println("Enter Employee Age:");
        age=sc.nextInt();
    }
    void display()
    {
        System.out.println("Employee Name:"+name);
        System.out.println("Employee Age:"+age);
    }
}
class Gross_Salary extends Employee implements Salary
{
    int TA,DA,HRA;
    public void Basic_Sal()
    {
        TA=(Basic_Salary*5)/100;
        DA=(Basic_Salary*10)/100;
        HRA=(Basic_Salary*15)/100;
    }
    void Total_Sal()
    {
        int gross_sal=(Basic_Salary+TA+DA+HRA);
        System.out.println("Basic Salary:"+Basic_Salary);
        System.out.println("TA :"+TA);
        System.out.println("DA :"+DA);
        System.out.println("HRA :"+HRA);
        System.out.println("Gross Salary:"+gross_sal);
    }
    public static void main(String args[])
    {

```

```
        Gross_Salary g1=new Gross_Salary();  
        g1.getdata();  
        g1.Basic_Sal();  
        g1.display();  
        g1.Total_Sal();  
    }  
}
```

OUTPUT

Enter Employee Name:

James

Enter Employee Age:

34

Employee Name:James

Employee Age:34

Basic Salary:1000

TA :50

DA :100

HRA :150

Gross Salary:1300

Program: Create user defined package

Create Package

```
package first_pkg;  
public class Hello  
{  
    public void display()  
    {  
        System.out.println("I am from Hello class");  
    }  
}
```

Access Package

```
//Accessing package first_pkg  
import first_pkg.*;  
class Welcome  
{  
    public static void main(String args[])  
    {  
        Hello h1=new Hello();  
        h1.display();  
    }  
}
```

Program: Create user defined package

Create Package

```
package VJTech;
public class Addition
{
    public void add(int x,int y)
    {
        System.out.println("Addition="+(x+y));
    }
}
```

Access Package

```
import VJTech.*;
class AccessVJTechPkg
{
    public static void main(String args[])
    {
        Addition a1=new Addition();
        a1.add(100,200);
    }
}
```

Program: Create user defined package

Create Package

```
package MSBTE;
public class EvenOdd
{
    public void CheckEvenOdd(int no)
    {
        if(no%2==0)
        {
            System.out.println("Number is EVEN");
        }
        else
        {
            System.out.println("Number is ODD");
        }
    }
}
```

Access Package

```
import MSBTE.EvenOdd;
class AccessMSBTEpkg
{
    public static void main(String args[])
    {
        EvenOdd e1=new EvenOdd();
        e1.CheckEvenOdd(13);
    }
}
```

Program: static import concept

```
import static java.lang.System.*;
class StaticImportDemo
{
    public static void main(String args[])
    {

        out.println("Hello");
        out.println("Java");
    }
}
```

Program: static import concept

Create Package

```
package StaticDemo;
public class Sample
{
    static public void display()
    {
        System.out.println("static function display of Sample class");
    }
}
```

Access Package

```
import static StaticDemo.Sample.*;
class AccessStaticDemoPKG
{
    public static void main(String args[])
    {
        display();
    }
}
```
